Picture Cards

Alternate ELPAC: Picture Cards for Optional Individualization

This document contains Practice Test picture cards  for all grades. The picture cards are for students who use picture cards or an AAC device as an expressive mode of communication. The picture cards should be printed or uploaded to the student's AAC device in advance of testing. Print or upload the picture cards for the student only at the grade being tested. Present the picture cards to the student following the optional individualization **IND** directions in the grade-specific and form-specific *DFA*. The student may point to, gesture, or gaze to a picture card to indicate a response to a test question.

If using printed picture cards:

1. Two-sided printing of the picture cards is recommended. If you are unable to print as such, be sure to attach the front and back of each picture card together. Note that you may enlarge the picture cards, based on student need.
2. Cut out and present the picture cards to the student following the optional individualization directions in the *DFA*.

If using the picture cards on a dynamic AAC device:

1. Capture the images of the picture cards and save on your computer in a file.
2. Upload the images of the picture cards to the student's AAC device as you typically would for the student.
3. Be sure to organize the picture cards on the student's AAC device following the optional individualization directions in the *DFA*.
